VisitRon Software

Standard is the standard version where the software and the database is on the same workstation in the Standalone machine.

Advance Software is the server application which can work with multiple locations, all connected to one master database.

Enterprise Software has all the features of the above version with additional advanced features such as pre-registration/email notification upon arrival/ check in and check out a visitor.

The Kiosk Tablet or Server Software App can be installed either at various sites or multiple entry points. VisitRon is user friendly software it is easy to operate especially in transaction or any point entry level and easy to deploy with the highest level of functionality, configurations and sophistication.

SECURITY

Visitron has multiple layer of securities from process to database and has sophisticated tool to enhance security level.

FAST REGISTRATION

Fast Registration check in and check out using the latest and most innovative ID readers available.

CENTRALIZED BASE

Centralised : Centralised base system can able to control and manage multiple locations / buildings / sites / entrances. All the permissions, verification, authorization will be maintained from centralized database.

SYSTEM REQUIREMENTS

System requirements : It supports Windows 8, Windows 10 and any above standard and professional version

BADGE PRINTER

Customizable Printing for visitor badge on any windows color or thermal badge printer.

INTEGRATION

System is capable to integrate with any existing access control where we can able to provide access for visitors at given time.

ON-LINE / ON-SITE

System is capable to book the pre-defined visits through portal or link and the same time it is capable to allow visitor to visit onsite and fill the form to visit through touchless technology.

WELL SECURED

System is completely secured and has better options to check and track each individual with having the permission even to block the access card any moment.

ENHANCE SECURITY

Security Breaches can occur when facilities on rely logbooks.

SAFETY INDUCTION

It is mandatory in industries to see the safety induction video or terms and conditions and its best was to educate the visitor through video and after that issue the visitor pass.

COMPREHENSIVE DASHBOARD

Visitron has provided comprehensive live dashboard to check live status of the reception area and if there is more visitors, manager can arrange more team to handle the numbers properly.

INDUSTRIES

This system can be utilized at any corporate offices, Healthcare, Government offices, Manufacturing industries, Education, Oil and Gas, Free Zones, Insurance sector, Banks etc.

VisitRon process the visitors in 3 to 7 seconds. Track frequent visitors easily and fast approval process. Scale-able from stand alone to multiple workstation and multiple locations and geographical area. It also caters multiple tenants in a single building with each tenant accessing their own records.

Visitor management is the front end tool to streamline the process by utilising the smart application. It can provide first impression to visitor about the technology being utilized by host company. Many organization are still depending on manual pen and paper process, with many limitations like time waste, no tracking, no control on visitor, no access control sync, does not show effective impression to visitors. Visitron provides excellent automation based on QR code to improve our client image with touchless solution.

VisitRon provides Email and SMS notification to employee when visitor is checked in or check out at front desk. One click report of who is in the building at any given time, particularly useful in emergency situations.
